Although SbSe<sub>2</sub>-based layered compounds have been predicted to be high-performance thermoelectric materials and topological materials, most of these compounds obtained experimentally have been insulators so far.

Metallocenophanes of p-block elements are somewhat unexplored compared to their transition metal analogues. A number of disila-bridged metallocenophanes with the group 14 elements silicon, germanium, tin, and lead, and the group 15 element antimony as central atoms were prepared and structurally characterized, expanding this little-explored ...
